

Foundations

- 1: Introduction Siebel Applications
- 2: Implementing Siebel Applications
- 3: Using Siebel Client
- 4: Working with Data in the User Interface

Architecture and Installation

- 5: Exploring the Siebel Architecture
- 6: How Clients Access Siebel Data
- 7: Installing Siebel Software
- 8: Introducing Server Administration

Security

- 10: Securing Siebel Implementations
- 11: Controlling Access to Views
- 12: Controlling Access to Customer Data
- 13: Creating the Company Structure
- 14: Authenticating Users

Exploring Siebel Applications

- 16: Understanding Object Definitions Behind a Siebel Application
- 17: Using Siebel Tools to Examine Object Definitions
- 18: Understanding the Siebel Data Model
- 19: Understanding Business Components
- 20: Understanding Party Business Components
- 21: Understanding Business Objects

Configuration

- 22: The Configuration Process
- 23: Managing Object Definitions
- 24: Editing and Compiling Object Definitions
- 25: Understanding the Physical User Interface
- 26: Configuring Applets
- 27: Configuring Applications, Screens, and Views
- 28: Configuring Drilldowns
- 29: Configuring Business Components and Fields
- 30: Creating Business Components and Fields
- 31: Configuring Picklists
- 32: Configuring Multi-Value Groups
- 33: Extending the Siebel Database

Data Loads

- 34: Exploring Integration Strategies
- 35: Introducing Enterprise Integration Manager
- 36: Data Mapping

- 37: Invoking Enterprise Integration Manager
- 38: Enterprise Integration Manager Considerations

Business Process Automation

- 39: Understanding Siebel Event Models
- 40: Using Siebel State Model
- 41: Introducing Siebel Workflow
- 42: Deploying Workflow Processes
- 43: Invoking Workflow Processes
- 44: Understanding Interactive and Long-Running Flows
